ABSTRACT

It is often observed that every department requires maintaining huge database of students to keep a record of their attendance, performance and also perform analysis of the same. This process requires lot of repetitive work such as scanning the database which is prone to errors. It is also a tedious job to generate various reports manually. Office automation is a key solution to all such problems. It automates the above processes i.e., it helps to create, collect, store, manipulate, relay, dispatch office information needed for accomplishing basic tasks and goals. Our software provides solution to all the problems related to academic activities in a department. It provides a simple and user friendly interface to various functionalities like creating Internal Assessment reports, Non Eligibility List, automatic storage of results, dispatch of results through E-mail or sms. It is designed to cater the needs of various users i.e. staff, students and data operators.
