# **Abstract**

This project is determined to provide a platform to a common man that include farmers, labors and general public to use a search engine that is friendly and efficient to them. Language reflects the culture of a certain community. It has its own nuances that impede the flow of meaningful communication. Language is a barrier in the internet business as internet users also include non-English speakers. With this fact, the project offers non-English speakers a people search engine with their own regional language, in particular Kannada and Hindi. The personnel information stored in the database is gathered from electoral roll in [www.ceokarnataka.kar.nic.in](http://www.ceokarnataka.kar.nic.in).

We have implemented the people search for searching voter's information in an electoral list. Currently available voters list is in pdf format which makes searching a record a tedious task. Our search engine makes searching easier. We have implemented the project using HTML, PHP and MySQL that makes it easily accessible at any location with an internet connection.
