ABSTRACT

Nowadays the parents who has to monitor their children's performance has to visit the college regularly which is not possible in their busy life or college cannot keep on sending their performance letters which is not sure to reach.

Here in our project,if the parents wants to know the performance of the student they can SMS and get reports, through SMS on their cell anywhere on the earth where there is network. The parent's can SMS at any time (round the clock) and get performance report of their children without any operator on the other side and also a confirmation for the sent SMS. The information has to be updated every month by the college.

The proposed can be used in such an application. This project implements automated SMS Response system using global system for mobile application (GSM) modem.

This is a good project for college, CET etc. This project has good data storage, and also a GSM modem, which is the latest technology used for communication between the mobile and the embedded devices.
