## **ABSTRACT**

As we all know in the present age due to the work stress or improper food habits some common diseases are found in human kind like hypertension, cholesterol and diabetes. These diseases cannot be cured completely but can be controlled and further sickness due to them can be prevented. The people who suffer from any of such diseases need to under go a medical course that is prescribed by the Medical consultant. But people generally forget to practice the prescription advised. So, the aim of this project is to design an automated system that can hold the medical history of the patients and acts like medical advisory or assistance.
