ABSTRACT

The main objective of this project is to provide development plans for women and provide easily available help in this busy world to bring up their children in good health. It gives them the detailed plans for health treatments for their kids. It has been made user friendly so that with ease they can get all information and also some social service programs.

The world today has proved that women have major role in all parts of life so we have prepared this project named AIMIA system which helps the women of this age to help them build a future for them.

AIMIA System is Computerized Automated system, which will provide help to the Women & Child Welfare department & Govt. Agencies. The focus of the project is the all round development of women and children and empowerment of women. The services offered by the Department can be broadly classified into 3 categories:

- Programs for Women's Development
- Programs for Child Development
- Social Service Programs
