ABSTRACT

The word **PATIENT MONITORING**, which itself defines monitor of the patients even in the absence of the doctor. It monitor the patient's Heartbeat, Body Temperature, Respiration and Glucose level.

In this project respected sensors are used to monitor the patient. If suppose the patient's Heartbeat, Body Temperature, Respiration and Glucose level varies, then gadget automatically sends SMS to the concern doctor mobile number about the variation of the data. Also if the doctor is out of hospital and wants to monitor or gets the detailed report of the patient, then by sending an SMS to gadget, it immediately replies to the doctor number with present status of patient, with the help of GSM Modem.
